## Lab overview

This beginner-level lab gives you hands-on experience designing and developing an end-to-end RPA automation using Power Automate. We'll show you the steps to build automate in less than a day.

Here's what you'll learn:

**Power Automate Desktop flows** 

Create desktop flows that can record and playback manual steps against Win 32 desktop application or website. Learn how to run UI automation in attended or unattended mode.

Integration of Desktop flows with API connectors

Create a cloud flow that automates an end-to-end business process by connecting the desktop flow and other API cloud services such as Outlook and Microsoft Teams together.

Be sure to take each prerequisite step in this document before you start any of the labs.

## Pre-requisite task 1: Setup Tenant

As prerequisites for RPA in a Day workshop, you need to have a valid tenant (Azure Active directory) account setup.

**Important:** If you have been provided with an existing tenant account through Office 365 or Power Automate licensing (prod or trial), you can skip this lab and start from lab #1.2

**Important:** In the next labs you will be using two accounts:

- 1. **Work account** to log in to Office 365 tenant (to log in to Office 365 services)
- 2. **Windows account** (to log in to your computer and to set up a connection)

If you don't have an existing tenant account to use, these steps will help you to set up one.

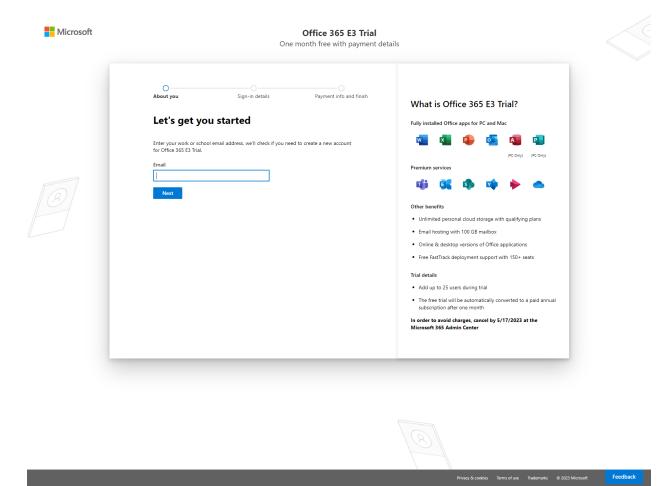

**Prerequisites**: To set up a tenant, you need an existing personal email account (refer to as Microsoft Account (MSA) below) and a cellphone that can receive text message for sign up verification.

If you don't have MSA, you can create one on <u>www.live.com</u>. Once you create your MSA, follow the steps below.

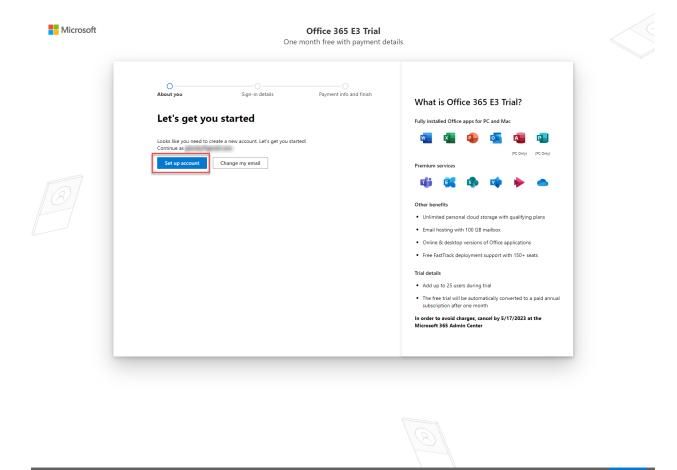

- 1. Open a browser and navigate to <a href="https://products.office.com/en-us/business/office-365-enterprise-e3-business-software">https://products.office.com/en-us/business/office-365-enterprise-e3-business-software</a>.
- 2. Select Free trial if you chose the first link, to navigate to trial sign up page.

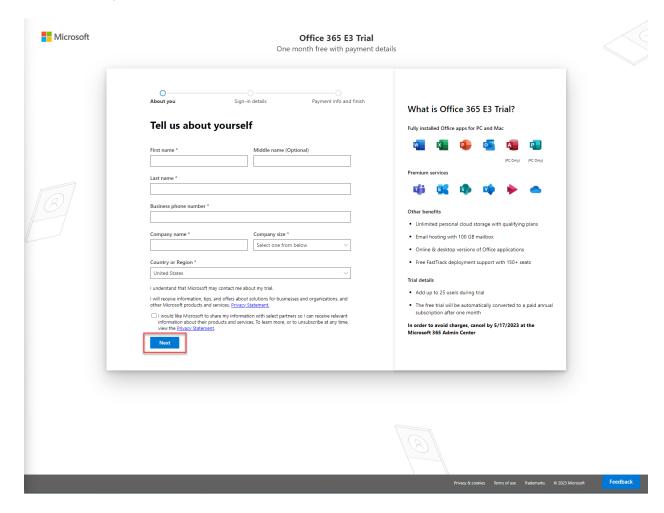

## 3. Enter your MSA e-mail address and click Next.

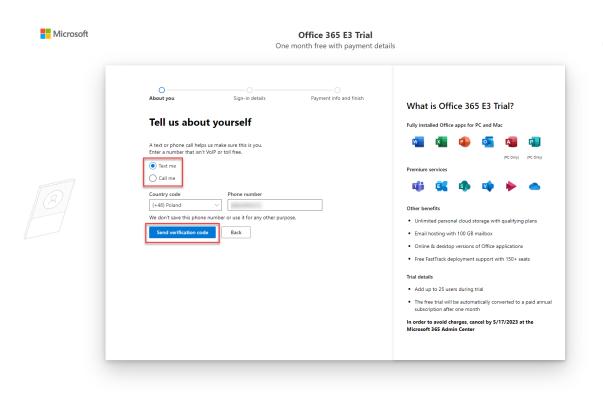

### 4. Click Set up account.

5. Fill in required information and click Next.

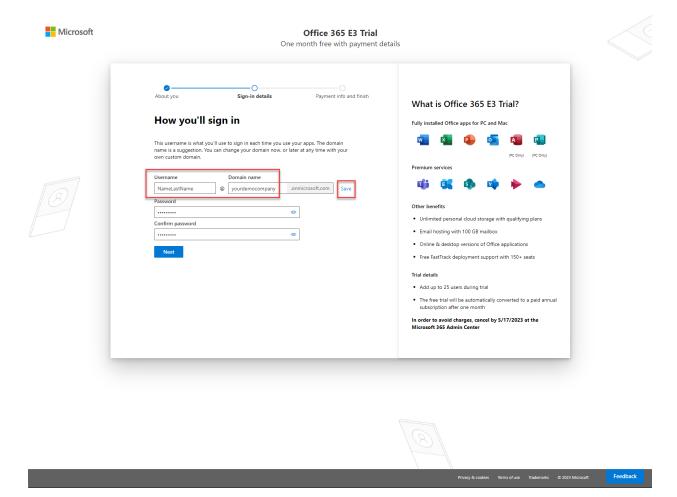

6. You'll be asked to verify you identify using either phone call or text message. Follow directions and confirm your identity by specifying phone number.

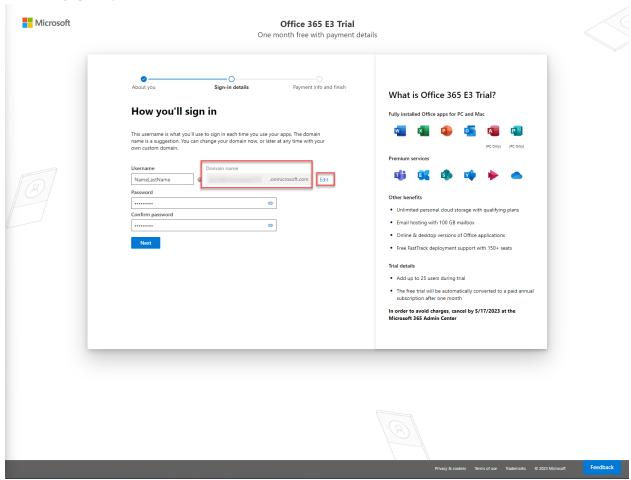

7. Once you verify your identity, you'll be asked to provide details to let you **sign in to your demo tenant**. Click **Save** to check if the provided domain name can be used.

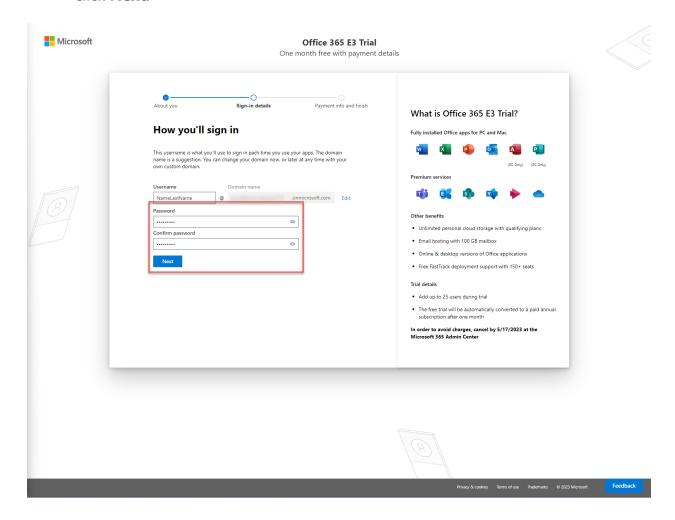

**Note:** you should choose your own unique tenant domain (we use yourdemocompany just as an example)

8. If the **Domain name** field is greyed out, it means that the domain name selected by you can be used. If you need, you can still change it by clicking the **Edit** link.

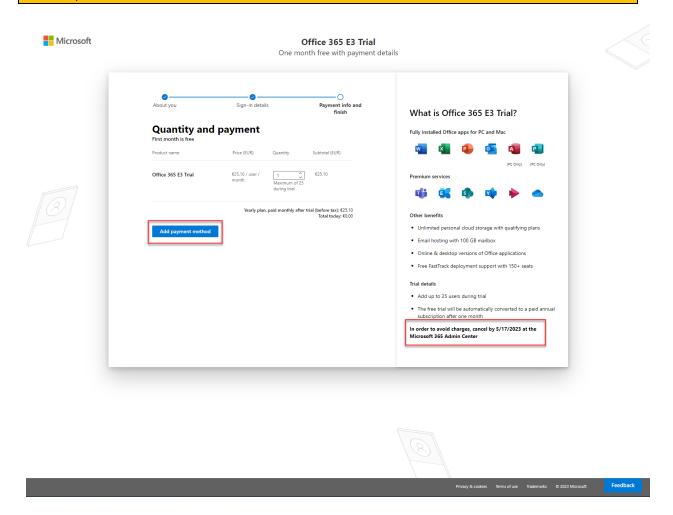

9. If the custom domain name is available, type in password and confirm it, then click **Next**.

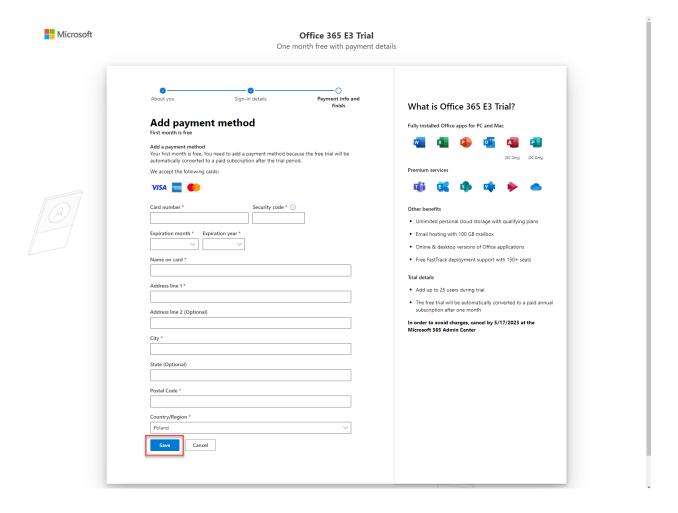

10. Wait while tenant is created. It usually takes less than 1 min. After you are signed in, hit **Add payment method** button.

**Note:** Remember to cancel the trial before it is turned into a paid annual subscription.

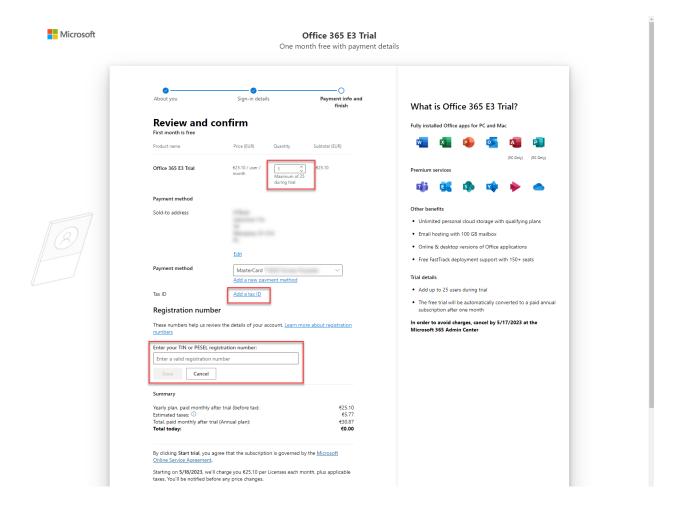

11. Provide your credit card details and hit **Save** button.

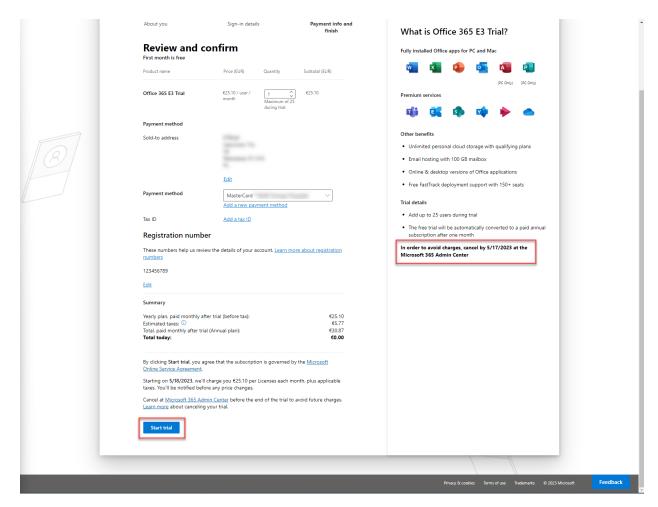

12. Next you can change the number of trial subscriptions that you would like to have with your tenant.

Additionally, if a tenant is registered with your company, you can provide its Tax ID number by clicking Add a tax ID link.

Also fill in your personal number or TIN number (although can be a fake one) and hit **Save** button.

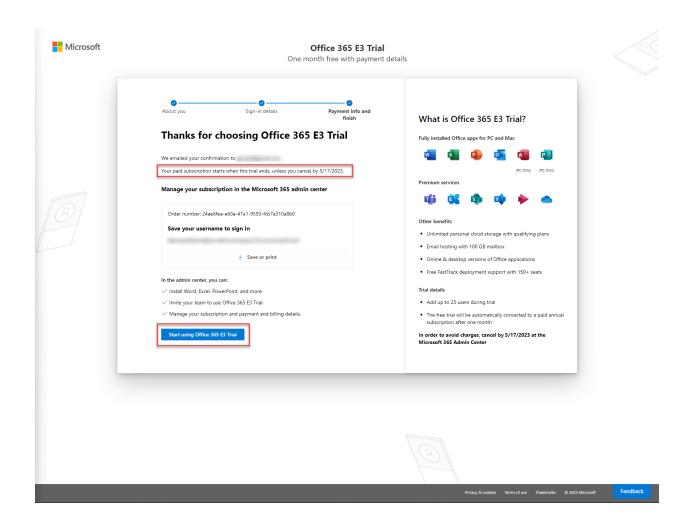

13. Next scroll down to the bottom of the page and click **Start trial** button.

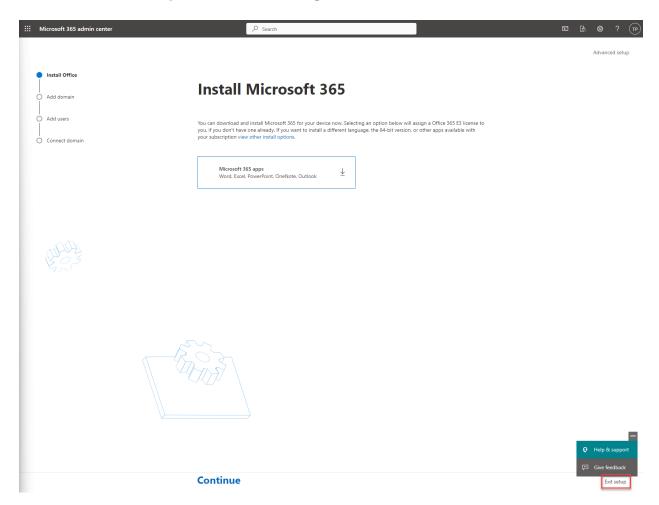

14. And you are all set! Click the Start using Office E3 Trial button to navigate to your new tenant.

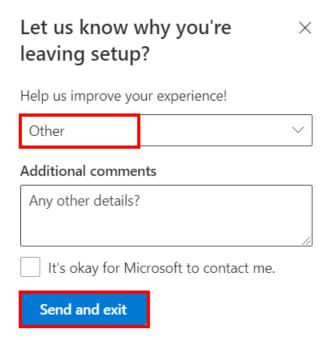

**Note:** Remember to cancel the trial before it is turned into a paid annual subscription – the date is shown on the confirmation page and sent to your email address.

## 15. Click **Exit setup** link (in a bottom right corner).

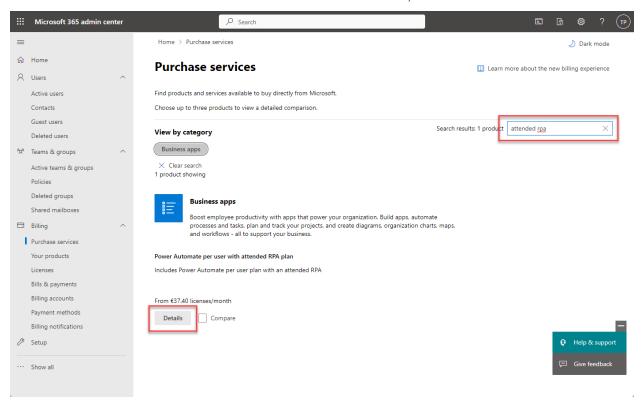

16. Select Other as the reason for leaving setup and then click Send and exit.

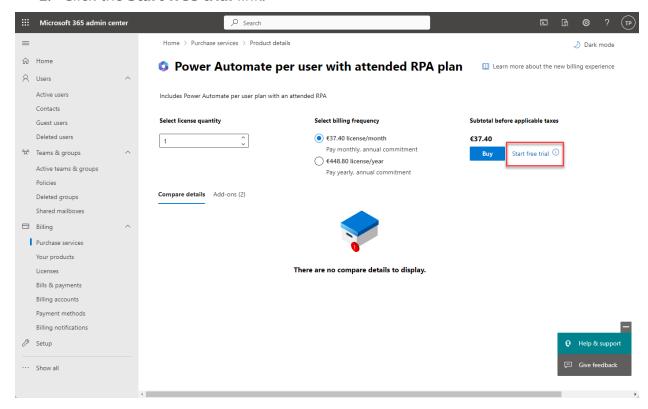

# Pre-requisite task 2: Start free Power Automate per user with attended RPA plan

 Navigate to "Purchase services" inside your Microsoft 365 admin center: <u>https://admin.microsoft.com/AdminPortal/Home#/catalog</u> and type in "attended RPA" in the **search box**. Then click **Details** button,

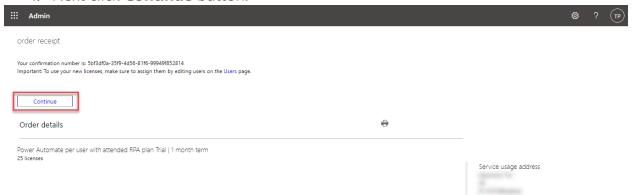

#### 2. Click the **Start free trial** link.

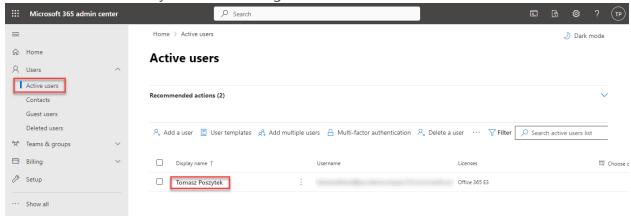

### 3. Click the **Try now** button.

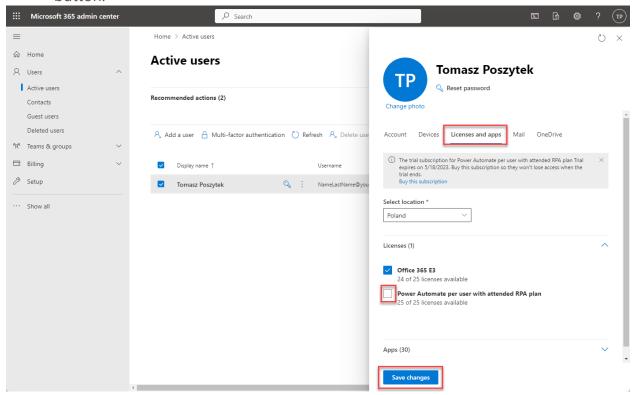

4. Next click Continue button.

Now navigate to the **Active users** page:
 <u>https://admin.microsoft.com/AdminPortal/Home#/users</u> and click **Display name** of the account you want to assign the trial license.

6. Select **Licenses and apps** tab and select the checkbox next to the **Power Automate per user with attended RPA plan** license. Finally hit **Save changes** button.

## Pre-requisite task 3: Create a trial environment with database

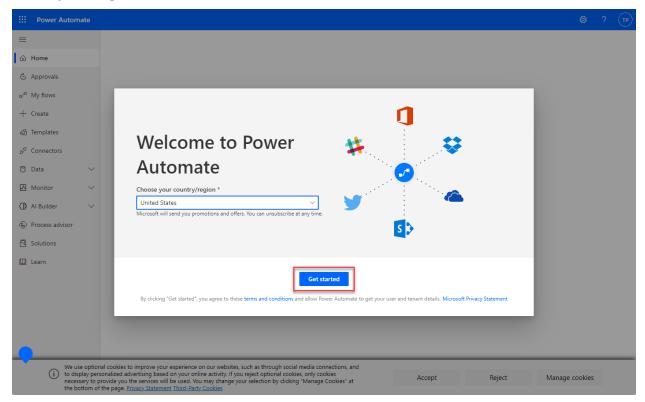

Now, you'll create a trial environment to explore Microsoft Power Automate.

Warning: When your trial expires in 29 days, your data and any customizations will be deleted.

You may want to save your work to use in another environment. To do that, export your work as a solution after you complete all the exercises in the Robotic Process Automation in a Day training.

## STEP A: Navigate to Power Automate portal

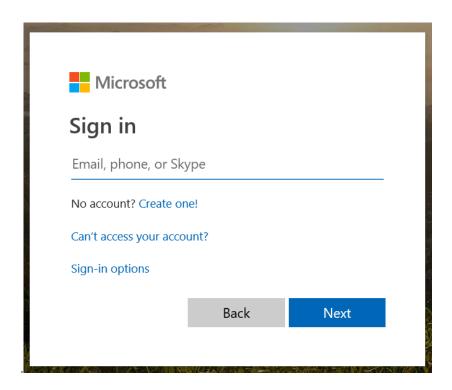

Click the link <a href="https://make.powerautomate.com/">https://make.powerautomate.com/</a> to open the Power Automate portal. Select your region and click **Get started** button.

## STEP B: Sign in

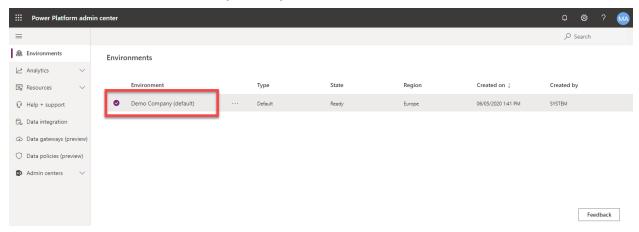

Navigate to: <a href="https://admin.powerplatform.microsoft.com/environments">https://admin.powerplatform.microsoft.com/environments</a>

On the **Environments** page, sign in with the test account's e-mail you created for this tenant domain if you're not signed in automatically.

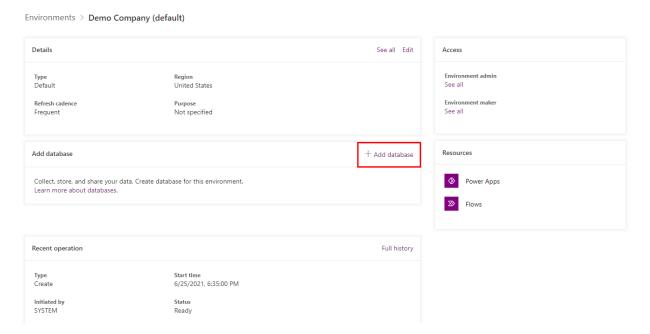

### STEP C: Configure your default environment to add a database

1. Select **Environments** in the tab bar (Note: you may need to expand the Left Navigation bar options to see it). Then select **your automatically created environment that has "(default)" in the name.** 

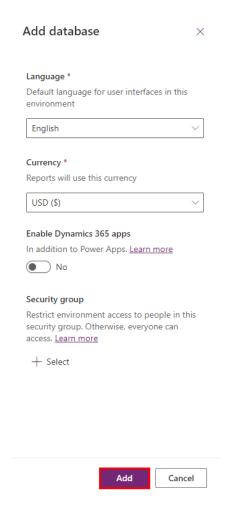

2. Select Add database.

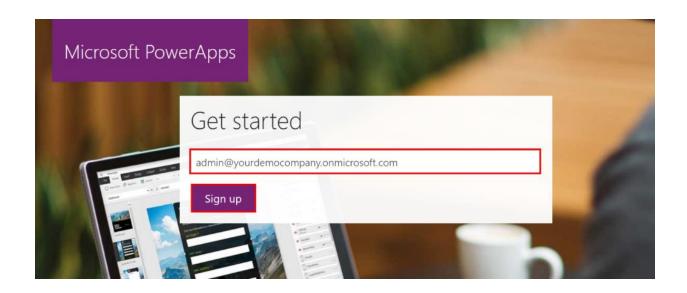

**Note:** If your environment already has a database created, you will not see this option on the page.

- 3. Specify values in the **Create a database for this environment** dialog box. Use these values:
  - Language: EnglishCurrency: USD

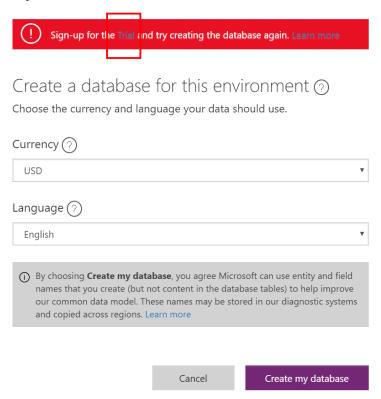

Then click Add.

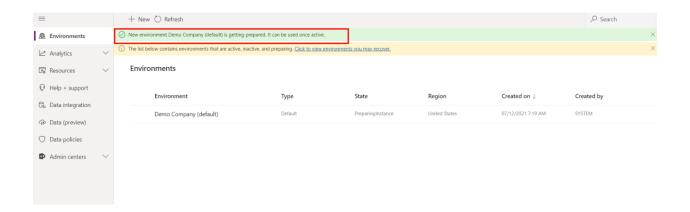

Note: You may be asked to sign in again.

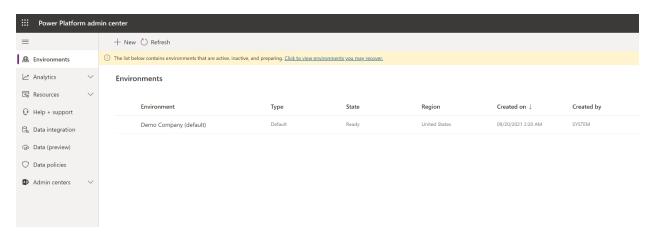

If you see the prompt of this picture below or other Power Apps signup page, just click "Trail" in the red banner, follow the instruction to sign in one more time, then repeat step above starting from Step B – navigate to <a href="https://admin.powerplatform.microsoft.com">https://admin.powerplatform.microsoft.com</a> and repeat Create my database.

4. After you clicked the **Create my database**, you can see the database provisioning progress.

**Note:** creating a database may take up to a few minutes. Please wait or refresh until you see the "New environment is getting prepared" message disappeared.

Your environment will be ready after the database is provisioned.

Once that's done, you're ready to go to lab #1.2.
